RETURN OF PRISONS AND PRISONERS.

Replies to the Questions, compiled from the Returns of the respective Superintendents.

QUESTION I.

If the prison is on the separate system, is the separation complete? And if not, what is the separation enforced by day and night, respectively?

All the penal stage prisoners of the Island, if sentenced to over a month, are passed through one of the following jails:—Welikada, Kandy, Jaffna, Anuradhapura, Galle, and Batticaloa.

In these jails the penal stage prisoners are worked on the separate system. They are confined in separate cells, and are worked in stalls. They are marched from their cells to the stalls in single file three paces apart, and are not allowed to speak or communicate with each other at all. Prisoners not in penal stage are not worked on the separate system.

QUESTION II.

If not on the separate system, what provision is there for the supervision of the prisoners while in association ?
The males are supervised by male officers of various grades, and the females by matrons, in all jails.

QUESTIONS III. AND IV.

How many cells are there ; and how many associated wards ? Taking the *average* number of prisoners in jail, how many cubic feet of space are there for each prisoner during the hours of sleep ?

QUESTION VI.

Is penal labour—that is, labour by treadmill, crank, or shot-drill—in force ?

The penal labour consists of beating coir husk, metal-breaking, and coir yarn twisting. Treadmill work is not in force now.

DIAGRAM No. 9.

METEOROLOGY.

General Remarks.—There is a marked variation in climate between the different parts of Ceylon. In the low-country, with a mean temperature of the order of 80° F., a noticeable feature is the small range of both temperature and pressure. There is, however, wide divergence between the moist conditions in the south-west of the Island, where the average annual rainfall varies from 100 to over 200 inches, and the dry zone areas of the north, north-west, and south-east.

2. Altitudes up to 8,000 feet occur inland, and there the temperature is cooler, and shows a bigger range. There is a corresponding change in vegetation, and the conditions are altogether more akin to those in the temperate zone.

3. *Rainfall.*—The year 1923 was one of exceptionally heavy rainfall. This was most noticeable during the south-west monsoon at the stations on the west and south-west sides of the Island. Carney Estate (between Ratnapura and Adam's Peak) had again the distinction of the highest rainfall for the year, viz., 319·3 inches on 280 days, or 93·1 inches and 47 days above its own average. A group of stations in the Ambegamuwa district were not far behind, and includes Blackwater 313·6 and Kenilworth 295·3 inches, while Watawala 288·1, Ingoya 282·9, and Kellie (Dolosbage) 271·8 inches are all noteworthy.

The exceptional activity of the south-west monsoon on the windward side was associated with exceptionally complete shielding so far as rain was concerned on the leeward side, but, nevertheless, the rainfall totals for the year were in most cases above average on that side too, thanks to heavy rain in January and December. St. Martin's Estate (Rangalla) had the highest total on the eastern side, namely, 209·4 inches or 27·0 inches above its own average.

At the other extreme Marichchukkaddi still holds the record for the lowest annual average, namely, 34 inches. Its total this year was 46·3, which is slightly above the totals at two other stations immediately south of it, namely, the Puttalam Eastern Saltern and Ponparippu Resthouse, where the 1923 totals were 45·9 and 39·5, respectively.

Colombo (Observatory), Kandy, and Nuwara Eliya recorded 95·4, 116·5, and 127·9 inches, respectively, which give excesses of 14·9, 32·7, and 34·8 inches above their respective averages. The longest drought occurred at Paranthan Railway Station, lasting for 191 days, March 15 to September 21. The longest wet period occurred at Labugama, lasting for 133 days, May 26 to October 5.

4. *Temperature.*—The station showing the highest mean shade temperature for the year was Trincomalee with 82·8° F., the lowest Nuwara Eliya with 59·8° F. The figures for Colombo and Kandy were 80·5° F. and 76·5° F., respectively.

The highest shade temperature in air recorded during the year was 99·9° F. at Trincomalee on May 8. The highest on record is 103·7° F. at Trincomalee on May 12, 1890. The lowest this year was 32·9° F. at Nuwara Eliya (6,000 feet above sea level) on February 17, at which station 27·1° F. was recorded in 1914.

The highest shade temperature at Colombo in 1923 was 92·5° F. on March 24, and the lowest 65·5° F. on February 7.

The mean daily range, i.e., the difference between the mean of the maximum and the mean of the minimum was highest at Badulla 17·7° F. and lowest at Galle 8·2° F. At Colombo and Kandy it was 12·2° F. and 15·0° F., respectively. The absolute range for the year, i.e., the difference between the highest and the lowest readings actually recorded at any one station was greatest at Nuwara Eliya (45·7° F.) and lowest at Galle (20·2° F.).

In the above table the tendency for both extremes to occur at the same time of year is noteworthy, and calls attention to the fact that in the tropics variations in cloudiness have a greater importance relatively to variations in the sun's declination than is the case in the temperate zones.

TABLE VIII.—Percentage Humidity for 1923 calculated from the Dry and Wet Tables issued by the Indian Meteorological Department. Figures in ordinary type are from the 9.30 and 3.30 readings, and so derived from temperatures that are rigidly comparable to each other, but give no detail of night conditions. The figures in *italics* give the mean of the humidity as derived from the maximum temperatures and as derived from the minimum. This only admits of approximate physical interpretation, since the dry and wet thermometers do not necessarily reach their extreme values simultaneously. It is, however, a serviceable approximation for several purposes, as it does include an indication of the conditions at night.

TABLE IX.—Average Monthly Air Pressure of Stations in Ceylon up to 1923 inclusive in inches of mercury corrected to 32° F. sea level and 45° latitude. The values given are at 9.30 and 15.30, which are practically the maximum and minimum values. The whole number is 29 inches throughout. These averages are for 12 years i.e., from 1912 inclusive. All the outstation instruments were recalibrated during 1923 in terms of the new standard No. 2,592 (casella) set up at Colombo in November 1922, and for the purpose of Tables IX., and X. the new index errors have been adopted in retrospect from January 1, 1923. The actual changes made were Colombo—.006", Puttalam—.005", Mannar—.001", Jaffna—.012", Trincomalee—.013", Batticaloa—.010", Hambantota—.016", Galle—.009", Ratnapura—.003", mean of all stations—.008", which is nearly the same as the difference between the old and the new standards at Colombo.

TABLE X.—Offsets of the 9.30 and 15.30 Air Pressure Readings of the Year 1923 from the Average.

During June, July and August it will be seen that the offsets were most negative at Jaffna and Trincomalee and most opposite on the West coast i.e., the gradient was steeper than usual and rotated so as to be slightly more from the south.

Another point of possible interest is that the 9.30 A.M., offsets are in nearly all cases more negative than those at 3.30 P.M.

† From 29 days' observations.

The values in Table XI., in nearly every case are above the average wind values, actual figures of which are not given owing to the variations due to changes of site, &c. The excess was particularly marked during the South-West monsoon, and agrees with the fact noted in connection with Table IX., namely, that the pressure gradient was steeper than usual at that period.

DIAGRAM Nº 10.

DIAGRAM showing the correlation between the PRESSURE gradient across CEYLON and the TEMPERATURE of the east coast during the South West Monsoon.

The firm line shows the mean of the daily maximum temperatures at Batticaloa for the months of June and July in each of the last eight years, while the chain line shows the difference in pressure between Colombo and Trincomalee for the corresponding periods.

Table XII.—High Velocities of Wind at Colombo, (Fort) during 1923.

This Table gives the times at which the highest velocities were recorded at Colombo (Fort). In the absence of recent Kew certificates for the instruments concerned, the numerical values below must only be excepted as approximations roughly comparable among themselves, but not precise. The time given is Ceylon Standard Time: 5½ hours ahead of Greenwich. The instrument was never out of action for a prolonged period though in several cases the breakage of a wire or stoppage of the clock have resulted in gaps of a few hours in the record.

HARBOURS.

QUESTIONS.

At bar or entrance, what is—

- (1) The minimum width ?
- (2) The minimum navigable depth, low water ordinary spring tide ?

Note.—If between the entrance and the deep sea there are bars or shoals where a lesser depth occurs than the minimum indicated above, a list of such obstructions and of the depths over them (low water ordinary spring tide) should be given.

2. In the approach channel from bar or entrance to berthing accommodation, what is—
 - (1) The minimum and maximum width ?
 - (2) The minimum and maximum depth, low water ordinary spring tide ?
 3. What is—
 - (1) The rise and fall of tides—
 - (a) Ordinary springs ?
 - (b) Ordinary neaps ?
 - (2) The rise of ordinary neaps above low water ordinary spring tide ?
 4. What is the maximum available depth of water—
 - (a) At piers or wharves low water ordinary spring tide ?
 - (b) In the case of enclosed docks in the entrance locks, if any, and at dock quays, high water ordinary neap tide ?
 5. What are the respective lengths of piers, wharves, or (in the case of enclosed docks) dock quays, where the maximum depth of water, referred to in Question 4, exists ?
What percentage does the total of these lengths bear to the total accommodation at the port ?
 6. What are the dimensions (length, loaded draught, and beam at that draught) of the largest vessels which, under existing circumstances, can be—
 - (a) Berthed alongside any pier or wharf (low water ordinary spring tide) ?
 - (b) In the case of enclosed docks—
 - (1) Admitted direct to ; or
 - (2) Admitted through the entrance lock of any important dock or docks, high water ordinary neap tide ?
 7. What are the dimensions (length, breadth, and depth over sill high water ordinary neap tide) of the largest dry dock or floating dock in the port ?
 8. Are operations in progress to increase the depth of water—
 - (a) At the entrance and in the approach channel ?
 - (b) In the case of enclosed docks at the entrance lock, if any, of any important dock or docks ?
 - (c) At the principal berths to 40 feet at low water ordinary spring tide (in the case of the berths at enclosed docks, high water ordinary neap tide), and is accommodation being provided for vessels 1,000 feet in length and of 100 feet beam ?
- If not, to what extent is deepening being effected, and for vessels of what dimensions (length draught, and beam at that draught) is accommodation being provided or in contemplation ?

ANSWERS.

COLOMBO.

1. Western entrance :—

(1) Width	..	..	..	Ft.	800
(2) Depth (about)	..	..	..	..	38*

 Eastern entrance :—

(1) Width	..	..	..	..	700
(2) Depth (about)	..	..	..	..	31·6 in.
2. Channels from entrance to anchorage :—

Western :—					
(1) Width	..	..	..	Ft.	630
(2) Minimum depth (about)	..	..	..	..	32
Eastern :—					
(1) Width	..	..	..	..	580
(2) Minimum depth (about)	..	..	..	..	28*

* Low water ordinary spring tide.

3. (1) (a) Ordinary springs Ft. 2
 (b) Ordinary neaps In. 8
 (2) Rise of ordinary neaps above low water ordinary spring tide
 (about) In. 12

4. No enclosed docks. All vessels lie out under the shelter of the breakwaters, and are loaded or discharged from lighters. Practically all of the western half of the harbour within the limits of dredging has a minimum depth of 31 feet below low water ordinary spring tide, but the greater portion of this is 33 feet deep. Practically all the eastern half has a minimum depth of 27 feet, but a considerable portion is 30 feet in depth or more.

Work is in progress near the western entrance to dredge the north-western portion of the harbour to 36 feet at low water ordinary spring tides, but it will take some years before the scheme is complete. One berth in both seasons is now complete for vessels drawing 33 feet of water.

One jetty for the discharge of oil and two for bunkering fuel oil have been erected in the harbour near the eastern entrance, and it is expected that the dredging for these will be completed in a short time. In addition, the guide pier is available for discharge of oil tankers and bunkering ships.

5. See answer to Question 4.

6. The largest vessel berthed in Colombo Harbour was the H. M. S. "Renown"; length 794 feet, breadth 90 feet, and draught 31 feet. With the existing arrangement, in addition to the berth for vessels of 33 feet draught, three vessels of 650 feet length and beam in proportion and 30 feet loaded draught can be berthed. With slight alterations longer ships could be berthed.
